ABSTRACT

This article discusses the current stage of development of society, the improvement of technology, information culture in the development of students' communication skills and their effective use.

Keywords:

Technological processes, globalization, foreign Internet resources, integral, national segment of the network, economic power, international prestige, democratic institutions, development, level, youth, students.

The current stage of development of society is directly characterized by the improvement of technology. Just as modern technological processes have affected any industry, so are the information systems. At the same time, the Internet is rapidly gaining a global audience around the world. As a result, today the Internet has the potential of all industries. In the context of globalization, information and communication technologies (ICT), first of all, the Internet has become a factor that directly affects the upbringing of children and adolescents. Currently, 5 million young users in the country have their own profile on social networks. Of these, 3.6 million use mobile phones to access the Internet. According to experts, information technology has become such an integral part of the structure of society that it is no longer just a technological process, but a social process. The economic power of the state, its international prestige, the level of development of

democratic institutions - all depend on the development of information technology.

Today, in order to strengthen the feelings of spiritual awakening of young people, to raise their morale, to purify their minds, to educate, to propagandize in a continuous, effective and effective way, advanced pedagogical using technology is the need of the hour. ICT plays an important role in raising the spiritual world of young people and educating them in the spirit of national and universal values. The challenge today is to teach students how to use the information they need for the right purpose in an ever-increasing information-learning environment. This will require the development of measures to increase and develop resources in the national segment of the Internet, to make them more accessible to users, to ensure the transparency and security of information, to protect and expand access to various external harmful information. In our country, the necessary conditions are being created for the upbringing

of a healthy and harmoniously developed generation, for them to reach the heights of modern knowledge and development, to demonstrate their abilities and talents. In this process, special attention is paid to strengthening the legal protection of the younger generation, educating them in the spirit of respect for the national traditions and values of our people, raising the spiritual world. No one can deny that the media has a great influence on their upbringing. The peculiarity of the process of globalization is explained by the fact that it can become a tool of ideological influence. Given the current situation in the far and near regions, it is undeniable that the Internet is being used to its advantage to mislead young people who have not yet formed their consciousness and outlook on life. Given the growing number of Internet users in Uzbekistan, in addition to the media as a source of information, the search for information on the Internet is gaining momentum. This requires increasing our national-spiritual information in the National segment of the Internet, regardless of the field. When local sites, portals can not provide the necessary information, then it is natural for the user to turn to foreign Internet sources. Unfortunately, not all information from foreign sources is equally accurate. For example, a fully-fledged independent individual has the ability to analyze, critically review, and select such information, but not all Internet users are among them. Most of them are young people, students, pupils.

With this in mind, to create the necessary conditions for the full satisfaction of the information needs of students of secondary schools, academic lyceums, vocational colleges, higher education institutions of the country, as well as the development of the Internet. In order to develop educational and educational information resources in the national segment, a number of orders and directives of our government have been issued. The information resources on education and youth created by various structures of Uzbekistan in the data transmission networks are integrated into a single information network Ziyonet. Its tasks are to form and develop national information

resources for young people, to ensure the wide use of information that helps young people to develop spiritually and mentally, to promote a healthy lifestyle and popularize physical culture and sports, assistance in the introduction of distance learning methods and other information and communication services for students and young people in the education system, further raising their legal culture and spirituality, and others. As a result of legal guarantees, with the increase in the number of media outlets operating in the country, the activities of non-governmental publications, radio and television have been revived, and their access to the global Internet has expanded. At the same time, one of the urgent tasks of today is to increase the role, influence and responsibility of the media in the process of democratic renewal and modernization in our country. Based on the above factors, our government pays special attention to information and ICT in our country. In particular, the Resolution of the Cabinet of Ministers of the Republic of Uzbekistan of February 1999 "On the creation of a national network and regulation of access to world information networks", and later "On the National Network of Data Transmission in the Republic of Uzbekistan for 1999-2003" Development and Improvement Program ", June 2002" On Measures for Further Development of Computerization and Introduction of Information and Communication Technologies ". In this regard, more attention is being paid to equipping a number of educational institutions in the country with technical equipment, including a new generation of computer equipment, as well as their connection to the Internet and electronic communications. All this in order to effectively organize the content of education, the introduction of new pedagogical and information technologies in educational institutions of the republic, the teaching of subjects included in the curriculum using new interactive methods and tools, including distance learning, the creation of electronic textbooks and to apply them to the educational process. Today, Internet users can be conditionally divided into two categories.

While the first category is those who use the Internet to obtain information and data necessary for their research or for the purpose of their research, the second category is simply interested in, say, filth, dating sites or online games. are in a transfer mood. The virtual world is manipulating man. Manipulation is the subjugation of the mind through mental dependence. It's no secret that some kids or teens are turning an Internet cafe into a second home. Observations show that online gamers are also mostly teenagers. Adolescence is a unique period in a person's physiological and social development. If boys or girls are exposed to aggressive online games during this period, it is likely to have unfortunate consequences. In the virtual world, a person's system of time perception is disrupted, social activity is reduced. That's why you don't notice the passage of time in front of the computer.

In addition, there are some groups and movements that have recently become more popular and are of concern to the public, parents and even the staff of the Ministry of Internal Affairs. Such groups, called "death groups" in the media, are usually spread through social media, mostly involving school-age children. The groups are led by experienced psychologists. The legal regulation of the information and related information process is of particular importance in the formation of a humane, democratic state and civil society.
