

Methodology of teaching in the military-patriotic spirit in general secondary education and specialized schools.

**Turayev Jakhongir
Anvarovich**

Deputy Head of the of Bukhara State University
Faculty of Military Education at the Pedagogical Institute

ABSTRACT

The decision on the measures to organize the activities of classes specialized in military-patriotism in general secondary education and specialized schools and the methodology of teaching students in the spirit of military-patriotism at school.

Keywords:

Interactive methods, activities of classes specialized in military patriotism, which continuously and purposefully prepares personnel for the National Guard system.

In accordance with the decision of the President of the Republic of Uzbekistan dated November 17, 2017 No. In order to inculcate feelings of respect for service, as well as to systematically prepare talented young people who have sufficient knowledge to enter the higher and higher military educational institutions of the Republic, the Cabinet of Ministers decides:

In accordance with the decision of the President of the Republic of Uzbekistan No. PQ-3392 of November 17, 2017, military personnel in general secondary education and specialized schools (hereinafter referred to as schools) specified in Appendix 1 attached to the National Guard of the Republic of Uzbekistan it should be accepted for information that specialized classes for the direction of patriotism (hereinafter - specialized classes) are operating. Creation of the necessary conditions for the organization of training sessions in specialized classes and practical training on the use of special military-technical and weapons are carried out in accordance with the procedure established by the Ministry of Public Education

of the Republic of Uzbekistan and the National Guard.

We can continue our speech with a well-known and famous saying: "To open a school is to close a prison", - the famous French writer Victor Hugo. In other words, where a school is opened, there will be education, and where there is education, the morale of students will rise. A mature and well-rounded generation is the present and future of the country. The issue of education and upbringing are concepts that complement each other and require each other.

By instilling this concept in the students, they will develop in their mind the feeling of loyalty to the country, willpower, ideological immunity, as well as their personal, emotional, speech, physical, creative abilities, and such important things as kindness, responsibility, tolerance, legal culture, hard work. forming qualities from childhood and at the same time increasing spiritual education, it is reflected in respect for the national, historical, cultural values of one's people, a careful attitude towards the environment.

It is worth mentioning that today, in order to fill the ranks of the National Guard of the Republic of Uzbekistan, special attention is paid to educating young people in the general secondary education school in the spirit of military patriotism.

In particular, classes specialized in military patriotism, which continuously and purposefully prepare personnel for the National Guard system, are being launched in 4 of 56 general secondary schools in each region of our Republic.

And in their place, school graduates will study their activities in departmental academic lyceums, that is, in the school of Temurbeks, and later in the Military-Technical Institute of the National Guard or in other higher military educational institutions of our republic, and in the future, officers who will graduate. It is planned to fill the ranks of the Armed Forces of the Republic of Uzbekistan, including the National Guard of the Republic of Uzbekistan.

From the first day of establishment of the National Guard of the Republic of Uzbekistan, attention has been paid to attracting young people who are rich in meaning, faithful to our values, traditions and customs, physically strong and intellectually capable.

The guarantee of the peaceful life of the people and the security of the country is the main task of our Armed Forces, which protects the independence of a young country that has stepped on the path of independent development and renewal of social relations. The next direction of military patriotism education is organization of physical education of young people. It forms physical endurance, the ability to carry heavy physical tasks in daily military service and combat conditions. Physical training is not only an important source of refreshment and optimism, but also a form of preparation for work and defense of the Motherland, and a form of productive use of free time. Kindergarten and school years are the foundation for the whole life, i.e., the time that instills the basics of health. Movement, gymnastics, sports games form positive qualities of young people. Cultivates qualities such as courage, will, ability to overcome difficulties. Deficiencies in physical education in

childhood are a complex and sometimes completely irreversible process in adulthood. The physical fitness of modern youth does not fully meet the requirements of modern production and service in the Armed Forces. On the other hand, the economic spheres are suffering a lot from the disease related to the mental, physical, moral, spiritual and spiritual conditions of young people.

The following factors should be paid attention to in the formation of military-patriotic feelings and the development of activities of the students of preschool educational organizations:

The first important stage is to determine methods and means of interest of students in the military field during training in pre-school educational organizations, and to carry out regular work on them.

Secondly, the importance of regular organization of military-patriotic events in pre-school education organizations, because it is appropriate if the students see every process with their own eyes. This serves as a foundation for the development of the sense of patriotism, the formation of abilities of the students.

Thirdly, it is one of the main issues to organize a visit of the students of the preschool education organization to military units, to familiarize them with military museums, to introduce them to various military equipment and technologies aimed at increasing their interest.

A plan of measures to educate the children of the preschool educational organization in the military-patriotic spirit has been developed, which includes the following:

- organization of "I'll be a soldier" training for students of summer camps;
- to organize sports games named "Jalaluddin Bahadirlari" aimed at increasing the desire and passion of the students to become brave, brave and brave young men and to form the feelings of being loyal children to the motherland;
- Familiarize them with military equipment regularly;
- the pre-school education department and pre-school education organizations should organize various events for children with the participation of the military, and on the basis of familiarization with state symbols (flag, coat of

arms, anthem), it is necessary to form in them a feeling of love for the motherland.

- in order for students to become loyal children to the motherland, educators in preschool educational organizations should pay attention to the following activities;

- Formation of initial ideas in the military-patriotic direction by telling fairy tales and stories.

- Memorizing poems and songs on topics related to love for the Motherland, protection of the Motherland is a sacred duty;

- morally stimulating children by organizing various contests and contests to draw pictures and strengthen their physical abilities in order to expand their imagination;

- showing military-patriotic cartoons and holding various games;

- it is intended to organize excursions to military museums and cultural and recreational parks related to the military-patriotic theme.

The following problems are justified in raising children in a military-patriotic spirit:

1) Non-availability or lack of military equipment, military models, military training grounds and military toys in the process of education in the spirit of military patriotism.

2) Non-availability or lack of textbooks, educational and methodical manuals, guidelines, didactic materials and training programs for educating students in the spirit of military patriotism.

3) The lack of meetings with the military, events and visits of the trainees to military units and military museums regarding the formation of military knowledge and skills in the trainees can be the main reason for the lack of interest and skills in the military field in the trainees.

Military patriotism training will give good results only if it is carried out in a way that is integrally connected with physical training. Therefore, it is impossible to imagine the education of military patriotism without physical education. The role of physical education and sports games is very important for the development of the qualities characteristic of the Defender of the Fatherland, such as tolerance to cold and heat, not succumbing to diseases easily, overcoming difficulties, willpower, perseverance, ability to

move quickly and quickly. The need to educate students in the spirit of patriotism, to prepare them physically and spiritually for the defense of the Motherland is one of the urgent tasks of today. Training of students in the spirit of military patriotism in pre-school educational organizations is now carried out through all systems of education and training.
