ABSTRACT

The introduction of information technologies into education will greatly diversify the process of information perception and processing. Thanks to the computer, the Internet and multimedia, a unique opportunity was created for students to absorb a large amount of information with further analysis and sorting. The motivational basis of educational activity is also expanding significantly. In the context of using multimedia, students get information from newspapers, television, conduct interviews and conduct teleconferences. It will be discussed about the use of innovative and communicative methods in teaching English.

The task of the teacher is to create conditions for practical mastery of the language for each student, to choose such teaching methods that allow each student to demonstrate his activity and creativity. The task of the teacher is to activate the cognitive activity of the student in the process of teaching foreign languages. Modern pedagogical technologies, such as collaborative learning, project methodology, use of new information technologies, Internet resources, help to implement a person-oriented approach in the educational process, individualization of teaching taking into account the abilities of children, their level of learning and ensures differentiation. Forms of working with computer training programs in foreign language classes include: learning vocabulary; practice pronunciation; teaching dialogic and monologic speech; teaching writing; development of grammatical events. The possibilities of using Internet resources are huge. The Global Internet provides conditions for students and teachers located anywhere in the world to get any information they need: regional geographical materials, news in the life of young people, articles from newspapers and magazines, etc. A number of didactic problems can be solved using the Internet in English in lessons: formation of reading skills and competencies using global network materials; improving the writing ability of schoolchildren; filling students' vocabulary; formation of students' motivation to learn English. In addition, this work aims to explore the possibilities of Internet technologies to expand the horizons of schoolchildren, establish and maintain business relations and contacts with peers in English-speaking countries. Students are on the Internet that they can take part in tests, quizzes, contests, Olympiads, correspond with their peers in other countries, have conversations, participate in video conferences, etc. The meaningful basis of mass computerization is related to the fact that the modern computer is an effective tool for optimizing the conditions of mental work,

in general, in any of its forms. The computer has one characteristic that defines its use as a tool for teaching others and as an aid in the acquisition of knowledge, and that is its inanimate nature. The machine can have a "friendly" relationship with the user and sometimes "support" him, but he will never show signs of anger and will not let you feel bored. In this sense, the use of computers is perhaps most useful in individualizing some aspects of teaching. The main goal of learning a foreign language at school is the formation of communicative competence, all other goals (education, training, development) are implemented in the process of realizing this main goal. Communicative approach includes communication training and the formation of intercultural communication skills, which are the basis of Internet activities. Without communication, the Internet has no meaning - it is an international multinational, intercultural society, whose life is based on the electronic communication of millions of people around the world, talking at the same time - this is the number and size of the participants in it. the biggest conversation on. Attending a foreign language class for him, we create a real communication model. Students can learn about the problem they are currently working on in a project.[1]

Currently, communication, interactivity, authenticity of communication, language learning in cultural context, autonomy and humanitarianism of education are given priority. These principles allow the development of intercultural competence as a component of communicative competence. The ultimate goal of teaching foreign languages is to teach a free orientation in a foreign language environment and the ability to adequately respond to different situations, i.e. contact Today, new methods using Internet resources are opposed to traditional foreign language teaching. To teach communication in a foreign language, you need to create real, real-life situations that stimulate the learning of the material and develop adequate behavior (that is, the so-called principle of communication authenticity). New technologies, especially the Internet, are trying to correct this error. Communicative approach is to consciously understand the material and it a strategy that simulates communication aimed at creating psychological and linguistic preparation for communication. It is not particularly difficult for the user to implement a communicative approach on the Internet. A communicative task should invite students to discuss a problem or question, students not only exchange information, but also evaluate it. The main criterion that allows distinguishing this approach from other types of educational activities is that students independently choose linguistic units to form their thoughts. In the communicative approach, the use of the Internet is highly encouraged: its purpose is to interest students in learning a foreign language by accumulating and expanding their knowledge and experience. One of the main requirements for teaching foreign languages using Internet resources is to create interaction in the lesson, which is usually called interactivity in the methodology. Interactivity is "combining, coordinating, and complementing communicative goals and resulting efforts by means of speech." By teaching the real language, the Internet helps to build speaking skills and abilities, and also ensures genuine interest and therefore effectiveness in teaching vocabulary and grammar. Interactivity not only creates real situations from life, but also forces students to give appropriate answers to them in a foreign language.One of the technologies that provide student-centered education is the project method as a method of developing creativity, knowledge activity, and independence. The typology of projects is diverse. Projects can be divided into monoprojects, collective, oral, concrete, written and Internet projects. In actual practice, it is often necessary to deal with research projects, mixed projects with creative, practice-oriented and informational features. Project work is a multifaceted approach to language learning, covering reading, listening, speaking and grammar. The

project method helps to develop active independent thinking of students and directs them to joint research work. In my opinion, project-based learning teaches children to cooperate, and learning to cooperate instills moral values such as mutual aid and empathy, builds creativity and activates students. In general, the inseparability of teaching and education is observed in the process of teaching the project. The project method develops students' communication skills, communication culture, the ability to form ideas concisely and easily, tolerance of the opinions of communication partners, the ability to obtain information from various sources, modern processes using computer technologies, creates a language environment that contributes to the emergence of a natural need. in foreign language communication. [2]The project form of work is one of the most relevant technologies that allow students to apply the accumulated knowledge on the subject. Students expand their horizons, the limits of knowledge of the language, gain experience in its practical use, learn to listen and hear speech in a foreign language, understand each other when defending projects. Children work with reference books, dictionaries, computers, and thus create the possibility of direct contact with the real language, which does not provide language learning in the classroom only with the help of textbooks. Advanced modern technologies, innovative approaches and interactive methods ensure that students are highly educated and highly qualified. It should be said that in order for students to learn the English language to have knowledge, skills, and competences in the grammar of this language, they must first of all have sufficient knowledge of the grammar of their mother tongue and be fully fluent in live speech. is characterized by compliance. In particular, one of the active lexical units in students' speech is the pronoun. First of all, if the knowledge and skills in the grammar of the native language about pronouns are formed,

then in English they can easily understand this topic.

In conclusion, the priority direction of modern school development has become the humanistic direction of education, where personal potential (principle) takes the leading place. This includes taking into account the needs and interests of the student, implementing a differentiated approach to education. Today, the main attention is focused on the student, his personality, unique inner world. Therefore, the main goal of a modern teacher is to choose the methods and forms of organizing students' educational activities that optimally correspond to the goal of personal development. The project method develops students' communication skills, communication culture, the ability to form thoughts briefly and easily, to be tolerant to the opinions of communication partners, to receive information from various sources, and to process it using modern computer technologies. a language environment that promotes the emergence of a natural need to communicate in a foreign language. The form of project work is one of the relevant technologies that allow students to apply the knowledge gained in the subject. Students expand their worldview, the limits of knowledge of the language, gain experience in its practical use, learn to listen and hear speech in a foreign language, and understand each other when defending projects. Children work with reference books, dictionaries, computers, and thus create the possibility of direct contact with the real language, which cannot be learned in the classroom only with the help of textbooks. Project work is a creative process. The student searches for a solution to the problem independently or under the guidance of the teacher, which requires not only knowledge of the language, but also a large amount of scientific knowledge, creative, communicative and intellectual abilities. In a foreign language course, the project method can be used as part of the program material for almost any subject. Each student is responsible not only for the result of his work, but also for the result of the whole group. Therefore, weak students try to find out what they don't understand from

strong ones, and strong students try to understand the task thoroughly. And the whole class benefits because gaps are eliminated together.
