ABSTRACT

This article highlights the importance attached to foreign languages in the Republic of Uzbekistan and the innovative technologies needed to study them.

After the independence of our country, the interest in teaching foreign languages has increased and many opportunities have been created for young people. As the first President Islam Karimov said, "At present, great importance is attached to teaching foreign languages in our country. This, of course, is not in vain. Today, there is no need to underestimate the importance of perfect knowledge of foreign languages for our countries, which are striving to take a worthy place in the world community, for our people, who are building their great future in cooperation with our foreign partners. As a logical continuation of these ideas, the Presidential Decree of December 10, 2012 "On measures to further improve the system of teaching foreign languages" expanded the opportunities for learning foreign languages. New methods and requirements for teaching a foreign language in our country have been developed in accordance with the Recommendations of the European Framework for Assessment of Knowledge and Skills of Foreign Language Teachers (CEFR). According to him, textbooks have been created for students of secondary schools and vocational colleges. In accordance with these requirements, classrooms are equipped with stands and new information and communication techniques. The demand for learning a foreign language is also growing day by day. Foreign language science is divided into four aspects (reading, reading, listening comprehension and speaking), each of which is given a separate understanding and skills. Educational technology is the effective use of modern information technology in the educational process. Also to improve the quality and efficiency of education through the introduction of modern innovative technologies in the educational process. In particular, there are several advantages to using such information and communication technologies in learning a foreign language.

The role of modern technology in language learning and teaching is invaluable. The use of technological tools is useful in every aspect of learning a foreign language (reading, reading, listening comprehension and speaking). For example, to listen and understand, of course, it is impossible to do this process without a computer, player, CDs. Listening comprehension is one of the most

important parts of language learning. At the same time, the student is required to pay attention to the pronunciation of the speaker, adherence to grammatical rules, vocabulary and its meanings. An important factor in the use of modern technologies in education is the ability of students to know and use information and communication technologies. Teaching and learning a foreign language using modern technology is one of the most effective methods.

This requires the reader to pay attention to the pronunciation of the speaker, grammatical rules, vocabulary and its meanings at the same time.

In this process, including:

- When using computers, the student can watch and listen to videos, demonstrations, dialogues, movies or cartoons in a foreign language;

- It is possible to listen and watch radio broadcasts in foreign languages and TV programs;

- use of tape recorders and cassettes, which is a more traditional method;

- CD players are available.

The use of these technical tools makes the process of learning a foreign language more interesting and effective for students [1]. Today, it is becoming a tradition in schools to teach through interactive games. It is known that the lesson is based on a variety of games that allow students to demonstrate their abilities, focus, increase their knowledge and skills, and become stronger.

Today, it is becoming a tradition in schools to teach through interactive games. It is known that the lesson is based on a variety of games that allow students to demonstrate their abilities, focus, increase their knowledge and skills, and become stronger. The basis of the use of game technology is an activity that activates and accelerates the reader. Psychologists point out that the psychological mechanisms of playful activity are based on the fundamental needs of the individual to express himself, to find a stable place in life, to self-manage, to realize his potential. At the heart of any game should be generally accepted educational principles, tactics. Learning games should be based on learning subjects. During the games,

the student is more interested in this activity than in a normal lesson and works more comfortably. It should be noted that the game is, first of all, a way of teaching. Students participate in play lessons with interest, strive to win, and the teacher also educates the student through them. The student is interested in believing that he or she can play, speak, listen, understand, and write in English.

We know that in the current educational process, the learner must be a subject. At the same time, focusing on more interactive methods increases the effectiveness of education. One of the most important requirements for English lessons is to teach students to think independently.

Today, English language teachers use the following innovative methods based on the experience of United States Statues, English educators:

- "Creative Problem Solving" To use this method, the beginning of the story is read and the end is given to the students;

- "Merry Riddles" Teaching riddles to students is important in teaching English, they learn words they are unfamiliar with and find the answer to a riddle;

- "Quick answers" helps to increase the effectiveness of the lesson;

- "Warm-up exercises" to use various games in the classroom to engage students in the lesson [3];

- Pantomime (pantomime) This method can be used in a lesson where very difficult topics need to be explained, or when students are tired of writing exercises;

- The method of a chain story helps to develop students' oral skills;

- "Acting characters" This method can be used in all types of lessons. Professionals such as Interpretter, Translator, Writer, and Poet can participate in the class and talk to students;

- "Thinkers meeting" It is possible to "invite" poets and writers such as U.Shakespeare, A.Navoi, R.Burns. At such times, the use of the wise words they utter in the classroom will help the youth to be brought up as perfect human beings;

- The method of "When pictures speak" is more convenient and helps to teach English, to

develop students' oral speech, it is necessary to use thematic pictures;

- Quiz cards are distributed according to the number of students and allow all students to attend classes at the same time, which saves time [4].

In short, the use of innovative methods in English lessons develops students' logical thinking skills, fluency, and the ability to respond quickly and accurately. Such methods stimulate the student's desire for knowledge. The student strives to prepare thoroughly for the lessons. This makes students active participants in the learning process. As the education system sets itself the task of nurturing a free-thinking, well-rounded, mature person, in the future we will contribute to the further development of effective use of innovative technologies by future teachers. possible.
