ABSTRACT

In this article, today's efforts to further improve the quality of life in our country, ideas about innovative ideas being created and the concepts of enlightenment, which are the key to human development, and instructions about the analysis of these ideas were given.

Keywords:

society, development, innovation, spirituality, enlightenment, human capital, knowledge, thinking.

Today, a completely new socio-economic, political-legal, spiritual-educational space is being created in our country. Our main goal is to develop human capital, strengthen the education system, and build a strong democratic society.

Progress is a form of development from simple to complex, from bottom to top, its rise. It is a mistake to apply development only to society. Because it is natural that growth is not only in development but in every field. Today, development is improving at a rapid pace. In the development strategy of New Uzbekistan for 2022-2026, strengthening the social protection of citizens and reducing the poverty are defined as the priority tasks of state policy, qualified medical and educational services with decent living conditions. Measures such as provision are provided. "Taking into account the demands of our people, we developed the development strategy of New Uzbekistan and during the election process, we passed it through a unique national discussion. In order to ensure the integrity and continuity of our reforms, this important conceptual document was put on the

agenda as an idea and main criterion based on the principle of "from the action strategy to the development strategy," the president said. Indeed, a new system was developed for the people, for the people. Everyone who does not stop working today will surely see the result tomorrow. In this way, every citizen can act freely and independently.

Innovation is an innovation aimed at improving the quality of manufactured products and services. If we direct innovation to our goal, it is the improvement of the harmony of our ideas and thoughts along the way. A person should not live without a purpose. What is the difference between a person without a goal and an animal. We are conscious beings. We have a mind to think and arms and legs to move. The driving force behind goals is needs. As the times improve, so do the needs. Without innovation, it is clear that there will be no competition or development in any field. It is no exaggeration to say that progress, innovation and enlightenment are the basis of the third renaissance. When this year was announced as the "year of active entrepreneurship, support

for innovative ideas and technologies", innovation began to be promoted more widely. New Uzbekistan also chose the path of innovative development. New - new ideas, innovative thoughts are the need of today's time. As time progresses, the need for innovative ideas increases. This, in turn, encourages to open the doors of opportunities for the implementation of new plans and programs. The development of human capital and the reform of the education system, the construction of a social-democratic state, the ongoing processes, favorable opportunities and an innovative environment are being created in our country on a large scale. The fact that many events are organized on this road is a driving force for every young generation. All such innovative changes improve our lives and aimed at relief. In recent years, a huge reform has begun in our country, which is full of age-old dreams and hopes of our people. There is no way. This is the policy of providing housing to ordinary people. It was a real innovative idea. From this point of view, it is worth saying that the policy of providing housing to the people who have only dreamed of having their own important shelter in our country for years, and finding a comparison and value of the happiness of a happy, full life that has entered thousands of families through this. difficult to describe. All these efforts are an example of attention to people and respect for their value. The President of the Republic of Uzbekistan Shavkat Mirziyoyev, in his congratulatory speech, emphasized that the goal of our development should be the third renaissance. In the end, this attractive innovative idea showed its coherence, the need to aim at the common goal of national progress in all aspects. "Renaissance" literally means "rebirth". The meaning of this term is quite broad: it means revival and rapid development in culture, science, art, education in general, in the life of society after a long period of stagnation. The third renaissance requires us to be more deeply integrated into the international community in the fields of science, technology, information, culture and economy. But we must preserve our identity, our language, our national character, our

spirituality. This, of course, requires serious attention to the education system. Man is the creator of the new renaissance. Every society needs people with different ideas. Such ideas that have been found serve to further increase the culture and art of the Uzbek people. The emergence of innovation and its implementation is called an innovative project. In daily practice, there is usually a lot of analogy between the concepts of news, innovation, and innovation occurs when any discoveries, new events, services and public only if the types of methods are deemed suitable for public interpretation recognized by the masses. Such ideas affect the following processes.

- Economical
- Organizational and management
- Legal
- Psychological

If we take a look at the history of developed countries, we would not be wrong to say that innovation was the first reason for the rise of such countries to the world. But it should not be forgotten that innovation and invention are not the same thing. These two concepts are fundamentally different from each other. Innovation and invention are the same thing. Yes, they are the same thing, but there is a big difference between these two concepts. Innovation is related to newness and modernization. Invention means creating something new. Innovation, creativity in a person motivates creative pursuit. An invention is something new and not yet known to the world, and innovation can be something new to an organization or industry. But it may not be news to the world. On the other hand, innovation is a modern idea that can be applied in the current situation. Now, if we define the concept of enlightenment, enlightenment is an education aimed at increasing people's consciousness, knowledge, and culture. It also means a complex of various knowledge and information about nature, society and man. Enlightenment removes spiritual dependence, gives strength to a person. Any society and its spiritual development cannot be imagined without enlightenment. Enlightenment is a concept that has spread widely not only in

Eastern countries but also in European countries. For example, Kant, one of the founders of German classical philosophy, tried to reveal the meaning and essence of this concept. He wrote in his book "What is Enlightenment? "Answer to the Question" defines enlightenment as follows. Enlightenment is the education of a human personality, the use of his intellectual and moral capabilities in the interests of the progress of society, that is, progress towards excellence. The needs of any society are also different. But in every society, the need for education leads all needs. A healthy person with physical and mental capacity always tries to gain knowledge. Only people with high spirituality and enlightenment live as my people and my country. An enlightened person can think sanely. His thoughts and ideas are always ready to answer the questions that arise in life and in every situation. Such people do not work with someone else's opinion, but with their own opinion. One of our tasks is to make science available to ordinary people. It is necessary to make everyone literate and enlighten the people with the light of enlightenment.
