### ABSTRACT

Since the content of education is connected with life, modern science, the tasks are to accelerate the economic development of the country, to improve the quality of education and the organization of education through the use of multimedia, automation of production, intensification on the basis of computerization. 'z finds the opposite.

### Keywords:

European Framework for Assessment of Knowledge and Skills of Foreign Language Teachers (CEFR), educational technology, CD-players, records and cassettes.

### Introduction

New methods and requirements for teaching foreign languages in the country have been developed in accordance with the recommendations of the European Framework for Assessment of Knowledge and Skills of Foreign Language Teachers (CEFR). According to him, textbooks have been created for students of secondary schools and vocational colleges. In accordance with these requirements, classrooms are equipped with stands and new information and communication technologies. The demand for learning a foreign language is growing day by day. Foreign language science is divided into four aspects (reading, reading, listening comprehension and speaking), each of which provides specific concepts and skills. Educational technology is the effective use of modern information technology in the educational process. It also aims to improve the quality and effectiveness of education through the introduction of modern innovative technologies in the educational process.

One of the most effective ways is to teach and learn a foreign language using modern technology. In this process, including:

- when using computers, the student can watch and listen to videos, demonstrations, dialogues, movies or cartoons in a foreign language;
- It is possible to listen and watch radio broadcasts in foreign languages and TV programs;
- use of tape recorders and cassettes, which are more traditional methods;
- CD players are available. The use of these tools will make the process of learning a foreign language more interesting and effective for students.

Nowadays, interactive games are becoming a tradition in schools. It is well known that a variety of play-based activities help students demonstrate their abilities, focus, increase their knowledge and skills, and become stronger. The basis of the use of game technology is an activity that activates and accelerates the student.

Today, English language teachers use the following innovative methods, drawing on the

experience of educators in the United States and the United Kingdom:

- "Creative Problem Solving" To use this method, the beginning of the story is read and the conclusion is left to the judgment of the students;

- "Merry Riddles" Teaching riddles to students is important in teaching English, they learn words they are unfamiliar with and find the answer to a riddle; - Quick answers help to increase the effectiveness of the lesson;

- "Warm-up exercises" use a variety of games in the classroom to engage students in the lesson;

- Pantomime can be used in a class where very difficult topics need to be explained, or when students are tired of writing exercises;

- A chain story method helps to develop students' oral skills;

- Acting characters This method can be used in all types of lessons. Professionals such as Interpreter, Translator, Writer, and Poet can participate in the class and talk to students;

- Poets and writers such as U. Shakespeare, A. Navai, R. Burns can be "invited" to the "Thinkers meeting". At the same time, using the words of wisdom they say in class will help young people grow up to be perfect people;

- The "When pictures speak" method is more convenient and helps to teach English, to develop students' oral speech, it is necessary to use thematic pictures; - Quiz cards are distributed according to the number of students and allow all students to attend classes at the same time, which saves time.

## Conclusion

Learning foreign languages is one of the urgent tasks of our time, and it is an urgent task of scientists and teachers to develop and recommend intensive methods of language teaching to the younger generation.

The use of innovative methods in English lessons develops students' logical thinking skills, fluency, and the ability to respond quickly and accurately. Such methods stimulate the student's curiosity. The student tries to prepare well for the lessons. This makes students active participants in the learning process.
