ABSTRACT

In this state, the content and essence of understanding information, analysis, attitudes, and the formation of an idea of an analytical attitude to information are summarized. The state also describes the conditions for the formation of an analytical attitude to information of students

Keywords:

information, analysis, attitude, education, self-study.

The training of intellectually gifted personnel in higher educational institutions of our country is one of the key factors in the development of society. In this regard, the Decree of the President of the Republic of Uzbekistan Sh. Mirziyoyev dated February 7, 2017 "On the Action Strategy for the Further Development of the Republic of Uzbekistan": "It is necessary to teach students to approach information creatively, freely, critically, independently, to form an analytical attitude to information¹".

Forming an analytical approach to information ensures that students are active, able to see clear goals and have new, multifaceted motivations for learning. Learning information is used more effectively in the learning process because it matches the goals and needs of students in acquiring knowledge. The teacher performs such a coordinating function in the educational process. Successful implementation of educational tasks is impossible without taking into account the pedagogical and psychological capabilities and facts that create conditions for the

effectiveness of the results of the educational process.

In the process of forming students' analytical attitude to information, it is important to study and develop an important mechanism for their independent and effective thinking.

Information is a word derived from an Arabic word that gives an idea of work, dictionaries².

Attitude - comes from the Arabic word, which means decency, conformity, permissibility. Attitude is the principle of a person's approach to reality, things in reality, events³.

Analysis - comes from the Arabic word "distribution" (handwriting) means "to check, investigate, decide, discover." Analysis is the study of things, events, etc. in terms of essence, law, and other aspects. Also, the concept of analysis is the process of determining the content of something and studying its essence, studying something, information, etc. from a certain point of view, evaluation⁴.

Analysis requires a creative approach and the application of various professional, social, and educational norms.

It is necessary to determine the effectiveness of each educational process in the formation and

development of students' analytical attitude to information, the application of advanced pedagogical practices and modern teaching aids, the most convenient and effective methods and approaches.

Organizes the process of developing data analysis skills among students based on an active study of the complexities of inclinations, interests, needs and level of activity of students, opportunities, personal characteristics, as well as opportunities for effective assimilation of information among young people. is necessary.

The conditions created in the process of forming and developing an analytical attitude to information among students should allow them to independently develop their personal qualities, and also serve as a motivating environment that encourages students to analyze and synthesize each piece of information. Therefore, when organizing the process of forming an analytical attitude to information among students, it is important to take into account the need to create the following conditions:

- the student plays a leading role in the analysis of his educational activities and obtaining new information, striving for self-development;
- have a high level of preparation and motivation for self-study;
- understand the future practical importance and need for self-study;
- the emergence of a high level of active desire to learn;
- be deeply aware of the importance and prestige of their profession, their place in society;
- to form and develop personal, psychological qualities that are important in the formation of an analytical attitude to information;
- to develop in students the ability to assess the level of their abilities;
- develop the ability to evaluate the results of their activities.

As a result of the application of these factors in the process of forming and developing an analytical attitude to information among students, a high level of student activity and understanding of information is an important

aspect of ensuring the effectiveness of the educational process.

In conclusion, it should be noted that the formation of an analytical attitude to information among students will undoubtedly increase the effectiveness of learning and lead students to new thinking in the learning process. It should be noted that when using the above methods, the teacher must be highly qualified, evaluate and comment on the correctness of the children's opinion. An activity that is valued in one way or another will have a more uplifting and active thought process.
