In this article, the teacher's readiness for professional activity, his personal and professional maturity, personal qualities, intellectual capabilities, social intelligence and its dependence on social and psychological factors are important in educating the intellectual young generation.

Keywords:

Higher educational institution, student, intellect, method, professional activity, creativity, teacher activity, innovative technologies, pedagogical ability, creativity.

Introduction

The contribution of teachers-coaches in raising the young generation, who are the owners of independence, to be educated, literate, spiritually perfect and physically healthy. The thorough knowledge and exemplary upbringing provided by them serves as a foundation for boys and girls who are on the threshold of great life to become patriots and real people in life, to become people who selflessly and honestly serve our country and people. Abdulla Avloni, a famous pedagogue of his time, wrote that "the happiness of every nation, the peace and happiness of the states depends on the good education of the youth." Any educational institution is working on the basis of intensive efforts to raise children as mature and well-rounded individuals in all respects. In this way, the young generation in preschool educational institutions, schools, colleges, lyceums and higher educational institutions will grow up to be the possessors of deep knowledge. Higher education is especially important. Because the student becomes a mature person and a highly educated person from here. Here we focus on higher education. Higher education is a place of training of highly

qualified specialists in various higher schools. Higher education is carried out by higher educational institutions by providing scientific and theoretical knowledge and formation of specific skills to those who wish to become highly qualified specialists in various fields of national economy, science and culture and who have completed the relevant requirements.

In the process of higher education, the student is given higher education. The concept of higher education means a set of knowledge and skills at a level that allows independent solving of theoretical and practical problems faced by a specialist in a particular specialty. Recently, our President signed two historic decisions in the field of higher education. "On measures to provide financial independence to state higher education institutions" and "Additional measures to ensure academic and organizational-management independence of state higher education institutions" decisions on" are important in raising the work in the field to a new level. Both decisions were a big news for the higher education system. The aim is to provide the society with a perfect person in all aspects.

Discussion And Results

Developing the student's intelligence requires hard work from pedagogues and psychologists. Today, reforms in the higher education system are growing at a significant pace, and the use of innovative technologies is finding its place in the education system. For example, most higher education institutions have switched to the credit-module system of education, advanced methods of studying and teaching, methods used in the educational process, more creative organization of the educational process, higher for the innovative development of education, the use of information and communication technologies, the use of educational platforms, and the hours allocated to the teaching of professions and specializations in higher education institutions are increasing. All this helps to achieve high results in improving computer literacy of teachers and students. As time improves, so does the scope of people's thinking. Also, foreign and private universities providing education based on modern curricula are operating in Uzbekistan. The quality of their education is sufficient.

New opportunities are opening up for the field of education. It is enough if young people use such opportunities wisely.

The future of our country undoubtedly depends on the development of educated, spiritually mature people of today's generation. In the decree of the President of the Republic of Uzbekistan dated January 28, 2022 "On the Development Strategy of New Uzbekistan" No. considering the process of mutual harmony of the interests of the individual and society as an important value, the plan of work is being implemented on the issue of reforming the educational system, raising the training of scientific personnel to the level of modern requirements as a priority area. . In fact, the society that educates more spiritually mature, spiritually pure, and physically healthy people and brings them to adulthood, it is inevitable that this society will achieve stability and perfection.

According to the decision on approving the concept of the development of the higher education system of the Republic of Uzbekistan

until 2030, setting priorities for the systematic reform of higher education in the Republic of Uzbekistan, having modern knowledge and high moral and ethical qualities, to raise the process of training independent thinking highly qualified personnel to a new level in terms of quality, to modernize higher education, to raise the content of higher education to a new level in terms of quality in order to develop the social sphere and economic sectors based on advanced educational technologies Today, in society, there is a need to preserve and even restore the position and importance of the book as a spiritual and moral food, the main source for the development of culture and language, an intellectual heritage passed down from generation to generation. First of all, publishing artistic, educational, scientific-popular, educational, literature aimed at increasing the intellectual potential of young people, providing educational institutions with them, sorting and translating the works of national and world literary figures on the basis of a well-thought-out system should be organized. In addition, it is necessary to stimulate the interest of the young generation in books. Every state, every nation is powerful with its intellectual potential and high spirituality. University life, practical pedagogical processes are very complicated. Pedagogical students have deep knowledge in this place of knowledge and have been achieving high results. This is due to the actions of teachers. Teaching is not an easy profession, on the contrary, it is a very responsible and difficult profession. Because the whole fate of the society is in the hands of the teacher. Owners of this profession work hard day and night. At the higher educational institution, students learn the following methods from teachers:

- Pedagogical skills
- able to express one's opinion fluently
- increasing students' interest
- being able to properly organize the lesson
- teaching to analyze, compare, etc

Pedagogical education process is based on modern information technologies and the wide introduction of communication technologies in

the formation of intellectual abilities of students:

- creation of distance learning courses and electronic literature;
- unification of computer programmers, relevant specialists;
- division of tasks among pedagogues;
- teaching students professional knowledge depending on their talent; - helps to gain deep knowledge through modeling of studied events.

During their work, teachers share their knowledge and skills with students. They use different methods and methods to deliver knowledge to students. But they don't care a bit about how it turns out.

There is a proverb in our people: "A teacher is as great as your father." This word has a deep meaning and content. Teachers are not bad. Without a doubt, we always bow to them. All of them are proud that their students have surpassed them. Today, teachers are required to have a more creative approach to the teaching process. Because for the student, novelty, a new approach attracts more attention. Even then, this process awakens the idea of creating something. Creativity to a person:

- striving for creativity,
- a creative approach to life
- Always critically evaluate yourself
- attentiveness
- analysis
- creativity

-helps to form such qualities. Therefore, it would be appropriate if the teachers of the higher educational institution organize the lesson process through a creative approach to increase the intellectual potential of the students.
