Characteristics of the Concept of Patriotism in Education of Ideal Youth

Salimov Maruf Eshdavlat

Independent researcher of the department "Pedagogy and General Psychology" Mirzo Ulugbek UzMU.

ABSTRACT

In this article, when providing information on the education of young people, while focusing on specific aspects of human qualities associated with the concept of patriotism, the problem of youth in Uzbekistan becomes a priority in public policy, and the future, i.e. Uzbekistan has its own place and unique aspects among stable and developed countries. There have been attempts to explain that the issue of youth is of particular importance. In this regard, the loyalty of young people who want to serve in the internal affairs bodies and the profession of military officers justified the feeling of greatness of the country.

Keywords:

youth, perfect man, future generation, upbringing, professional loyalty, motherland, patriotism, professional loyalty, upbringing, welfare of the country, socio-political strength of youth, awareness of their interests, values, fate, prospects for the motherland, the formation of a sense of motherland among young people

As everyone knows, today the problem of youth in Uzbekistan is a priority in public policy. The work done since the independence of our country and now the leadership of the Republic on the path of youth maturity, personally our president, etc. M. The care provided by Mirziyoyev is a vivid proof of our opinion. (3.23.) In the introduction of the problem chosen by us, which is in tune with the demand of the period, the support of the president and the government of the Youth Union, an effective Institute for working with young people completely new, free from old ideological convictions, the allocation of special grants for young people to study in higher educational institutions, a new type After all, tomorrow is in the hands of our youth today. Therefore, raising the younger generation as a mature, perfect person in all respects, protecting their political, spiritual and social interests, especially in this regard, raising the responsibilities of state and non-governmental organizations in a fundamental sense, is one of the most pressing issues of the chosen topic. Promoting social protection of young people, holding events on

the formation of national pride, a sense of loyalty to the motherland, comprehensive support for young people in a market economy, organizing new jobs for them, providing grants for high knowledge, searching for talented children in our republic and making them laugh is a requirement of the period. The current period, which is rapidly developing, should give our young people a decent education, make their aspirations for science come true. To this end, we need to develop the system of preschool education, radically improve the material and technical base of secondary and higher educational institutions, the quality of scientific and educational processes.

Through the spiritual and educational aspects of which the theoretical aspects of the article are more scientifically based, an attempt was made to shed light on the fact that it is advisable to carry out youth love for the motherland with attention to enlightenment. Decree of the president of the Republic of Uzbekistan dated August 4, 2018 No. 3898 "on radical improvement of the system of increasing the spiritual and educational level of military

personnel of the Armed Forces of the Republic of Uzbekistan" was adopted. In this regard, in the system of the Armed Forces of the Republic of Uzbekistan, every Friday of the week was designated as the "day of spiritual growth and patriotism".. It is aimed at increasing the feelings of courage, courage, pride and pride in young people and military personnel, strengthening the spiritual and educational knowledge of military personnel and their family members, forming in them a sense of patriotism, love for the motherland, loyalty to the National idea. The fact that young people, who make up about 65% of the population of our country, are a large socio-political force, on the one hand, imposes a huge responsibility on the state, and on the other hand, positive opportunities arise as a result of pursuing an acceptable youth policy. That is, the relationship between youth and the state is strengthened in the process of properly directing young people to life, creating material and spiritual conditions for them to take their place in life. It naturally serves for young people to hone their sense of patriotism and exalt it. Such a policy pursued by the state in relation to young people directly increases the responsibility of young people to comply with their rights and duties. Paying attention to the practical aspects of the article, patriotism is one of the main principles of loyalty to universal values. Patriotism is a concept inherent in high spirituality, faith in the Motherland, a sense of responsibility and awareness of duty to the motherland and nation. Patriotism is extremely multifaceted, constantly improving and developing in the process of historical, social, political, economic development. The more the interests, dignity, fate, prospects of the motherland are understood, the higher the sense of the motherland in people. Therefore, each of us should consider working with young people as our duty. "We all know well: the period from 15 to 18 years old is the most delicate, most complex period in human life. At this age, human consciousness, behavior and morality, spiritual image are completely formed.

Who can guarantee that in the future they will grow up to be perfect people if we leave our children who have not yet lost their bones to

their state and do not engage in upbringing, science and spirituality? Who will we put in the hands of our society, the future of our state? When we think of the perspective of our society, the fate of our nation, the confession, the happiness of happiness, we must first find the answer to this question."

Of course, the achievement of this task will not be by the power of one organization or office. As far as the future of the nation and the state is concerned, all state and non-state organizations in this case should be joined together. In the era of our republic, rich in development and change, human development in every possible way is the demand and need of the present. Youth education is the most pressing problem of our time. Children are the future of our state, not family and parents. The fate of the future generation requires great responsibility from our society and, therefore, from each of us. In every family and every society wants its offspring to grow into spiritually mature people. School, family, neighborhood and public cooperation are important in increasing the level of educational work among young people, developing its various methods, solving such a huge responsible, honorable task. In the past period, there were good phrases "your father and mother of seven armies", when our children swore something, everyone who was walking down the street did not look indifferent and everyone understood this correctly, and now, when they are given such events, they are taken to the kurmas and given to certain parents, they work in the grave" what do you do, Innovative reforms in the education system: through the eyes of scientists and young people. Currently, crime is on the rise as a result of what has been done knowingly and unknowingly among young people. This is a consequence of the fact that parents pay little attention to the conditions for students not to waste their free time from classes or shut them down with the game and work they love. It is worth noting that the upbringing of a harmonious, patriotic healthy generation is not only the task of an elegant parent or educational institution, but we are all equally responsible for this. It should not be forgotten at all that for education-Garbia to take place correctly, there must be unity in the

Family, Educational Institution and the demands that Mahalla puts on young people.

The transition from one stage to another in the development of human society is expressed in the fact that the Enlightenment begins and the mature, conscious, educated people of the time spread spirituality and enlightenment. As a result, innovative reforms in the system of enlightened education: through the eyes of scientists and young people, people overcome spiritual dependence, fear and go down in history as the owner of incomparable strength, potential. As the president of the Republic of Uzbekistan Shavkat Mirziyoyev noted, "as the Wise Men of the East say, "the greatest wealth is intelligence and science, the greatest inheritance is good upbringing, the greatest poverty is ignorance!" Therefore, for all of us, the assimilation of modern knowledge, true enlightenment and the possession of a high culture should become a continuous vital need."

One of the important issues is the formation of a system in our country so that citizens can live a peaceful peaceful life and ensure reliable protection of society from terrorist, subversive attacks, manifestations of crime that cause such an emergency as extremism in all forms, organized crime. Among the sectoral services of the internal affairs bodies, Special Service units have their place, and in the event of an emergency, in the capture of armed criminals, in the neutralization of devices at risk of an explosion or when the situation requires urgent measures, these service personnel are contacted, they are employees of a mobilized detachment performing special operations, sappers and cynologists of Employees of the Department of coordination of special operations of the Ministry of internal affairs of the Republic of Uzbekistan and its on-site structures ensure public order and safety in crowded places and holding public events. As a result of a quick and professional approach of employees of special units to work, destructive forces are neutralized and rudeness is repelled. Criminals are captured and the illegal circulation of weapons and drugs is prevented. Employees performing such responsible service tasks are brought up in the spirit of patriotism, they are required to have strict life views, a

sense of responsibility for the future of the Motherland, the qualities of patience, courage, self-confidence, self-control and loyalty to their profession, to have strict skills in applying modern weapons, techniques and special tools, theoretical and practical knowledge These requirements provide a new innovative approach to training mature specialist deaf people for this Sokha, modern information in the learning process. Innovative reforms in the education system: in the eyes of scientists and young people, the organization of training, retraining and professional development of personnel using communication technologies effectively necessitates.

Taking into account the specificity of the duties of the serviceman, which are performed by law enforcement agencies, in particular, special units of Internal Affairs bodies, it is necessary to quickly carry out a qualitative assessment of the task of providing the educational process with special educational literature, educational-methodical and practical manuals. Today, using their advanced foreign experience, it will be appropriate to create educational immersion complexes in the eyes of scientists and young people in the educational system, which are brought closer to real situations in order to improve special combat skills and train employees who will serve in special units of law enforcement agencies of the Republic in the future and to move in.

Today, The Motherland is tasked with creating the embodiment of innovative reforms in a new education system that will serve as an example for young people: harmonious people, modern heroes through the eyes of scientists and young people. Only mature people can build a free and prosperous Motherland, a free and prosperous life, which our independent motherland has as its supreme goal, turning harmonious, noble ideas into their life beliefs. Therefore, in our renewed Society, high attention is paid to raising perfect people by educating a healthy generation, forming the spirituality of a free citizen, raising spiritual and educational work to a high level. Perfection is a set of many original human qualities and qualities, such as kindness, justice, correctness, conscience, honor, will, entrepreneurship, fortitude. As mentioned

above, the idea of a perfect person has long been a noble dream of our people, an integral part of the spirituality of the nation.

In conclusion, we can say that our people have wonderful habits, traditions from time immemorial, love for the land, holy knowledge of the mother and the motherland as a prostrate person, not lying, not betraying someone else's right, respect for the older one, and honor the younger one are among them. These are permeated with the life, lifestyle, spirituality and mentality of our people. When such thought is considered, it becomes clear that in these requirements of our ancestors, the most necessary qualities for society and Man are mentioned. The descendants of those whose faith is firmly established will grow up to be worthy children who have consolidated these characteristics in themselves. Therefore, our homeland is investing all its efforts and opportunities in the younger generation, in its upbringing.
