**ABSTRACT**

In this article, the main goal of guiding students to the profession is to help each student individually to choose the field of profession or technological activity in a basic and correct way, the question of the important tasks of pedagogues in guiding students to the profession is discussed. drawn up.

**Keywords:**

method, interactive, small groups, profession, embroidery, decoration, wool, thread, silk, pattern, image, folk craft, creative thinking, competence, international studies

The main goal of career guidance is to help each student make the right choice of career or technology field. Vocational orientation of students is a component of the work of a general education school. It is known that if the profession is chosen correctly, technology becomes a source of joy and creative inspiration for a person. Guidance for choosing a profession is a general school task that is solved by the entire team of pedagogues. At the same time, technology education occupies a special place in this work. The main factors in students' choice of profession are parents, environment and education. The main task of choosing a profession is to arm students with polytechnic technology and skills, to prepare them for technology and social activities, to consciously choose professions, and to participate in the production of material and spiritual wealth.

- further improvement of students' interest in the profession;

- bring it to the level of choosing a profession;
- providing practical help to students with versatile interests to choose the field and profession they like the most;
- to educate students to respect people who use technology;
- taking into account the specific interests of the students, gradually involving them in the social technology of the society;
- providing sufficient information about professions;
- education of qualities of comprehensive saving of material resources created by human technology;
- attracting students to the profession they are interested in and achieving practical application of acquired knowledge;
- to arouse students' interest in choosing technology and profession. When this process is properly organized, it ensures the formation of a person as a subject of future professional activity.

Vocational orientation is carried out on the basis of long-term comprehensive programs and taking into account the national folk craft professions. Not limited to orientation to certain types of professions, but taking into account the needs of personnel in various sectors of the specific economic region, orientation of young people to professions in industry, other branches of agriculture, and national craft professions in the technology education classes of general education schools is appropriate. In particular, "Working with clay and plasticine", sculpting, pottery, painting, sewing, embroidery, "Working with gauze and threads", which are taught in the process of technology education and upbringing of primary school students. , hat making, silk making, weaving, designing, giving information about the professions of farming, flower growing, gardening, entrepreneurship related to the type of work "Working with different and natural materials", teaching classes to the public it will be necessary to organize education on the basis of national values.

Vocational work at school has the following goals:

1. To acquaint students with various sectors of the national economy, starting from small classes.
2. Acquaint students with various sectors of the national economy, the content of popular professions, and conduct extracurricular activities.
3. In carrying out career guidance, students are mainly referred to professions and specialists necessary for the needs of enterprises and organizations of the area where the school is located.

Choosing a profession is a very important issue, and often students cannot solve it on their own. The work experience of teachers determines the differences and methods of guiding students to choose a profession. The main ones are:

1. Guide to choosing a profession in classes. For example, a teacher introduces students to occupations related to the work they do in technology classes. Also, they learn and get acquainted with woodcutter, frame maker,

carpentry, sewing, cooking and other professions.

2. Guidance on choosing a profession during excursions. Usually, on excursions, there are favorable conditions for introducing students to material outside the scope of the curriculum. This opportunity can be used to guide students to choose a profession.

3. Guide to choosing a profession in circle training. There are more opportunities to introduce students to different professions in circle classes.

4. Holding meetings on various topics. Usually, after graduating from general education schools, students have a great impression on their conversations with people who work in manufacturing industry institutions. In the process of technology education, students get to know different professions.

5. Holding various cultural and public events. All kinds of cultural and public events that help to successfully conduct career guidance work are known from the work experience of schools. For example, organizing debates on the topic "World of Professions", "Personal and Public Opinion in Choosing a Profession", and discussing movies.

6. In-depth study of the content of professions. In addition to working with all students in one way to give an idea about certain professions, the teacher works more seriously with students who want to get to know this profession better. He unites students into groups or microgroups based on their interests. In this case, various forms of district organization of work are used. Pupils write essays on their own, conduct excursions.

7. Optional training. In some schools, a certain part of the hours allocated to optional classes is used for career guidance. When the profession is chosen correctly, they can better realize their abilities and interests and bring more benefits to society.

Educational activities in the educational process are of great importance in career guidance, interest, and formation of qualifications and skills. Therefore, there is an incomparable importance of the specific characteristics, goals, and tasks of educational work on technology education. Choosing the

right profession is an important step in a person's life, the success of the young generation throughout their life largely depends on the right choice of profession.

Information about professions

Teaching profession

The teaching profession is an honorable profession. A teacher is a person who gives us knowledge. With the knowledge received from the teacher, a person will find the path to perfection in the future. For this, of course, it is necessary to acquire the knowledge given by the teacher in depth.

When I get knowledge,

Let's learn letters and numbers.

Successfully solving the issues of raising students to be mature and well-rounded in all aspects, forming an active life position in them, mastering and improving the quality of knowledge largely depends on the effective work of extended day groups. Activities organized outside the classroom complement the educational activities in the life of students. They help to form their worldview correctly, choose a profession, and achieve moral maturity.
