ABSTRACT

This article calls on words that represent quantitative in Uzbek linguistics and their application. The amount of Uzbek linguistics is covered by whom and how it has been brought. Uzbek linguistics are given views on what situations of the amount of words that are quantified. Information on every word of words of words that Milor is in the series and its application categories.

Keywords:

Words That Express The Amount, Categories, Measurements, Numbers, Element, Units, Lexical, Lexic.

Introduction.

We encounter words that are quoted in Uzbek linguist in almost all areas. It is no exaggeration to say the amount that all words occur within the categories. For example, a horse-word category: unit and plural; Low, many and few words of the ravish word; The quality word category is one of these things and more. Among these are a series of the above-storist word among the amount of numbers numbered.

Today, scientists from many Uzbek and foreign countries is widely covered by this topic, and this topic is also covered based on the views of these scientists.

The main part.

Quantitative words are in different languages, as well as Uzbek. He also specializes in his unique features and diversity reaches. Almost all the language levels representing the amount that represents the amount. The quantities of the world and Uzbek linguists are diverse on the category of the category of

words and its specificities and their relationships on classifying this system.

By Russian and European linguists, this system is different directions and analyzed according to aspects. An amount, especially by Russian linguists the issue of units is a number of scientific researches that are the issue of wide and detailed work is carried out. G.A.Menovhikov "The level of unit in different languages Rationalist methods, S.I. Krasova, is the phraseological representing the amount in Russian units ", A.I.ashkevich "Metodography of modern Russian language indicating genetic devices ", N.V.Manuaylov "Scientific skills these include research, such as the category of structure".

The amount is available to calculate different categories and measure units implies. In combining units representing the amount and a unit test the interaction of categories and signs is carried out the feature, is about a set of concepts of different essence, there is logical classic categories. In most cases, the amount represents units are subject to and

described other semantic categories and describes them. The speech serves as an attributive element in the attachment of language units.

Philosophers are the quantity category while studying objective existence, they say different. This diversity amount, number, measure, covers different signs such as size. Quantity Training of the solid connection of the category with other categories possible. Researcher V.Igoshina to study the relationship between other categories, i.e., inter-category attitude, uses morphotemnum analysis.

The amount of multiplika identifiable with the amount and units follow below, it is reflected in the way:

1. Common plural. In this case, the exact amount is understood: all, crowds, single

2. Note of Note. In this case, it is determined by means of lexical-grammatical, words: without you, beodob. In addition to forming an additional new word of the word here, the word loads the meaning of additional quantities. However, by the help of the former, the word can be loaded the plural meaning, i.e., through the form of form: flowers.

We know that a pen in many areas of linguistics Mahmoud Kashgari in history in history as a rock. His scientific works that left for future generations are not only for that period, but also in the development of today's Uzbek linguistics. Indeed, the first ideas of words that I want to learn today is also Mahmoud Kashgari, we encounter in the Docto Liquoy-it Turk. It is the number in the verbs by comparing the expressment in Arabic, two in Turkish languages and plural he said that the number does not have differences, that the number suddenly divides into two contradictions groups, which contradicts unit and plural forms.

The unity expressed the representation of the verbs that the covers of verb is form without any additive, and the plural (NG), (IGs), (IGs), with examples. For example, bar - so that the form of scientist is only

He also said that he may express the meaning of respect without expressing plethal.

"If the hearing age is older, respectful, respect for respect is called" this. " Along with representing unity and plural, the differences between the tribes also open will be given. "The bar and sweatshit are bars, and bars in the boil. They drop the plural crowd, and they use the listener unit - (i). Inside a person for respect, in their language.

The plenty is also used for the man, "he said. The vague "IT-fu'fatuz Zakiyatu, the Fil-Dogat-Itziyat, has reported the amount of words. The horses have said that there is a plural form of unity and plural in numbers, the plural shape of the plural shape, and there is no such shape in units. In addition to these forms, M. Kashgare explains the differences between the horse and pronouns of privateism. The author shows the plus two types of divisions. The plummet is being expressed by plungement, but also by phonetic changes. Not, we are the expressions of the unity conflict in the interrogation and prospects like you say: Who is - who is, this is in the same way.

The availability of special indicators for three persons and these figures are mentioned differing in the unity and multiplicity: Like a bash-on-law, bashing - bashing. It is also given on the numbers under the headline "Size section". Four levels of numbers are divided into:

1. One (numbers up to nine): One, two, three, four, five.

2. Tenments (Ten to ninety): ten, decay, etivate, emiLi, atmones, seventy, eighty, ninety.

3. Hundreds (the number of up to a hundredth to a thousand thousands): hundred, two hundred, three hundred

4. Thousands (the number of more than a thousand). In this case, numbers from one.

Before, many numbers come after: two thousand, three thousand, four thousand. In the thighs that represent decisions in the work, then the decimal, after which The words expressing unity are said to be, sometimes it can be a reflection: twenty-one - a twenty-one.

Sequence numbers are said to have been credited by adding to the first, -chi, -angji affixes, as the second, for the second, for the second, for the second.

However, in the play, the verbs are also provided by the individual and paradigm.

Unit

Speaker: I have seen (see) - coming to

Listen by: You are here - you are

Other: Come - Celebrations

From the above, in the work of "AT-Tugha", M. Kashgariy Morphology of M. Kashgariy language has provided valuable information about units, especially the amount. It is no exaggeration to say the first grammar of Turkic languages.

The words of the word category of the Uzbek linguistics are the sign of the number of things, however the number of words meant in the history of the word, and the words of the number, as it means that the number means that the number expressed, and them for imagining with the subject together

Abdurauf Fitrat, thoughts about the possibility of learning among the qualities We can observe in linguistic views.

Fitrat divides divides into radical and artificial species .Tub numbers count numbers is calculated. They are like one, two, three, four, ten, twenty, forty-five enters. The following is as follows in terms of meaning and blasphemers of artificial numbers divides into species:

1. Reference
2. Share numbers
3. Soft numbers
4. Without the calculated numbers
5. Friendships
6. Increase Thigh
7. Measurement numbers

The numbers formed in the prime numbers - (i) the number formed to join The number is included in the number of numbers. An example of the birth of the first, second-shaped numbers brings. Book of one of the prime numbers - (a) r, the addition,

The share of numbers like Bitterness is included in the number of numbers.

- The total number of addictions is made of the amounts of the components: dozens of books, like hundreds of people. At the same time, the meaning meaning of the suit is also revealed when pairs of fitrat.

Country numbers are said to have a non-filled number grown by the addition of the right to. They went to three people. He emphasizes that the numbers formed from such an accession should be studied among the horses, and with this opinion refers to the gathering of the numbers.

The number formed from the accession of the number of counting numbers calls a friendly number. Because such numbers are more than one person. Explains that we both came. Evening he tells us to learn about horses such as a number.

Country numbers said that the manager is generated by the number is formed: hundreds, like thousands.

In addition to the above, the name of numerative words in today's linguistics The measurable measurable words are studied, calls the numbers used in the words, the whole case of measurement numbers. Ten bags barley, like a swallow of succeeds.

It also closely treats that fitrat cannot be used along with the plural form of numbers. He pointed out according to the add to the add to the add to the add, that measurements, measurement, measurement numbers and these numbers cannot be used in the plural forms.

In addition, F. Safarov "In Uzbeks, the micro-timeland and His candidacy on his dissertation on "His Lional Feature" It turns to the matter as a field. However, the researcher is taken to itself. The scientific research, which is made and the two opinions, expressed the amount of the amount viewed as a category, in fact the number of numbers in Uzbek. There are twigs, syntax, word-book and nitrogenous means, significantly in combination with the number category and the verb of the person's personality

He does note that the general meaningful task is to form a system⁴⁶. In this case, grammatical, lexical, syntical and fanetic and collective. The system of expression of the number of Uzbek language is seen, contact interactions, the share of this meaning. It is opened.

In conclusion, it is worth noting that the word quantity is a place not among the absolute words, not only among additives.

Quantitious words Every word is available within a category, they can also mean that there is not just a number of counses, but also to lack and lack. The wise and polite words are wise and polite words for example, whether intelligent and mankind is perfect in human mind, on the contrary, intelligence and obscene words, intelligence and etiquette. The lack of human mind emphasizes that it is not developed.

There is also synonymity among words that refer to the person in the amount of the amount of the amount of the amount, because the amount of the inappropriate, takes a speechless corruption. can come.

For example, if we take a large-great-giant synonym, each word in it has its own application. We cannot use a giant word to the use of great words.
